cv272@cornell.edu - (+1)347-438-6455 - [linkedin.com/in/chaithat](https://www.linkedin.com/in/chaithat)

Software Engineer

Ithaca, New York

Education

Cornell University

M.Eng. in Computer Science

Ithaca, NY

Expected Spring 2027

University of Washington - Seattle

Seattle, WA

Bachelor of Arts, Data Science, Geography - 3.8 GPA - Deans List: 2018, 2019, 2020, 2021, 2022

February 2022

Work Experience

Strike Social (strikesocial.com)

Bangkok, Thailand

Software Engineer (Remote)

February 2024 - April 2026

- Owned the campaign validation framework that blocks misconfigured advertisement campaigns before launch. Built a date range validator for ads, eliminating false positives and negatives in campaign date range verification.
- Maintained and built Airflow DAGs pulling daily performance data from eight ad platforms (Google Ads, Meta, TikTok, LinkedIn, Snapchat, Pinterest, DV360, YouTube), including partitioned warehouse tables, dbt models, and integration test suites.
- Migrated high-traffic API services from sync to async (FastAPI + async SQLAlchemy), refactoring billing, contract, and creative background tasks onto independent DB sessions to remove connection-pool contention.
- Worked full-stack on the customer-facing dashboard (Vue.js + FastAPI), shipping features end-to-end from schema to UI in permissions management, Zitadel SSO integration, and dashboard templates.
- Built the React Native and Stripe proof-of-concept selected over competing framework and payment-provider evaluations, setting the technical direction for a new cross-platform consumer product for influencer ad-spend automation.

Cash Flow Portal (cashflowportal.com) - YC Winter Batch 2022

Seattle, WA

Early Engineer, Full-Stack Software Engineer, Tech Lead (CRM)

February 2022 - June 2023

- Appointed Tech lead for the CRM product. Responsibilities included writing and running tech and product spec reviews with the team, then drove features from design through delivery in an Agile environment.
- Shipped core CRM features end to end: multi-factor authentication, drag-and-drop email builder, email campaign tooling, and contact tagging and management.
- Ran on-call rotation covering E2E testing, deployments, and customer communication to reproduce and resolve production bugs.
- Mentored and managed interns and new hires on codebase practices, frameworks, and team culture.

Projects

tallad.co

May 2026 - August 2026

Solo Engineer, Founder

- Building a two-sided marketplace for second-hand fashion: launched Stripe Connect payment flow (cards plus local payment methods) with a reservation system that prevents double-sales.
- Implemented idempotent webhook processing across two signed Stripe event streams, with terminal-state guards stopping redelivered or out-of-order events from corrupting completed payments.
- Created real-time buyer-seller chat over WebSockets and Redis pub/sub, including a Thai/English content scanner that flags attempts to move sales off-platform using Unicode normalization and zero-width stripping to defeat evasion.

Agentic RAG for Document Search

September 2026

- Built a document Q&A system with PDF ingestion, parent-child chunking, hybrid retrieval, and source-cited answers.
- Built a bounded agent loop that can reformulate queries and retrieve more evidence before generating an answer.
- Combined vector and full-text search using reciprocal rank fusion and cross-encoder reranking, then evaluated different retrieval configurations against synthetic and real data benchmarks.
- Implemented atomic document re-ingestion with rollback to prevent failed updates from overwriting existing document data.

Dell Technologies × NVIDIA Agentic AI Hackathon

September 2026

- Built a local AI agent prototype on Dell GB10, using on-device inference to analyze and act on private/local data without relying on external APIs. (NemoClaw + OpenShell + vLLM)
- Developed the end-to-end demo under hackathon constraints, integrating local model inference with custom tools and an interactive application workflow. (React + FastAPI + MongoDB)

Skills

Programming: Python, TypeScript, JavaScript, Java, SQL, HTML/CSS

Frameworks & Libraries: React, Vue.js, Next.js, FastAPI, Flask, Express.js, SQLAlchemy, Apollo GraphQL, Hasura GraphQL

Data & Infrastructure: PostgreSQL, Apache Airflow, dbt, Redis, WebSockets, Docker, Linux, AWS S3, Git,

AI/ML: PyTorch, Hugging Face, vLLM, NVIDIA Nsight Systems, LangChain, LangSmith, OpenClaw, NemoClaw, OpenShell

Languages: Thai (Native), English (Native)
